RE: Patient Clearances to Hospitals on Diversion

Treasurer
Linda Foster

Director
Mark Ambrose

EMS Agencies transporting stable patients that demand to be transported to hospitals that are on diversion are to utilize the 911 Center for patient clearances, and do not have to make radio contact with the Resource Hospital physician.

Director
Robert Duell

Director
Troy Hogue

When hospitals are on forced rotation, the Resource Hospital will continue to decide which hospital is up next to receive patients. The clearance to the receiving hospital can be sent via the 911 Center, and units do not have to use telemetry if the patient is stable. **All unstable patients should have their clearances called in on telemetry at all times.**
